Research Interest

I am passionate about building general intelligent systems that process information at scale and assist humans in various knowledge-intensive tasks. My recent work focuses on efficient large language model pre-training and neural information retrieval.

Software

Photon v1.1: https://naturalsql.com/	Salesforce, 2020
Photon is a deep learning based cross-domain natural language interface to databases that focuses on factual look-up questions. It allows end users to query a number of relational DBs in natural language, including DBs it has never been trained on.	
Tellina v1.0: http://tellina.rocks/	University of Washington, 2017
Tellina is an end-user scripting assistant that can be queried via natural language. It translates a natural language sentence typed by the user into a piece of short, executable script.
