## Software

<b>Photon v1.1:</b> <a href="https://naturalsql.com/">https://naturalsql.com/</a>	Salesforce, 2020
Photon is a deep learning based cross-domain natural language interface to databases that focuses on factual look-up questions. It allows end users to query a number of relational DBs in natural language, including DBs it has never been trained on.	

**Tellina v1.0:** <http://tellina.rocks/>

University of Washington, 2017

Tellina is an end-user scripting assistant that can be queried via natural language. It translates a natural language sentence typed by the user into a piece of short, executable script.
